

Scheme of work Year 11

Lesson Number	Learning Outcomes and Learning Intentions (WALT)	Success Criteria (WILF)	Activities	Resources
1	WALT Establish baseline measures for coordination, strength, and aerobic capacity.	Movement Skills 1. Follow hexagon pattern safely 2. maintain balance 3. Perform consistent foot placement. Strength 4. Maintain plank alignment Endurance 5. Pace shuttle test Record results accurately.	Warm up Perform each test in the following order: hexagon test, plank test, 2-minute shuttle run. Cool down: Stretch for calf, quads, hamstring, chest, shoulder	Cones Mats Timer Dumbbells or weighted objects Skipping ropes Sleds with light load

2	11.2 Sustain individually planned endurance blocks aligned with personal goals (e.g., HIIT, circuits, sport-specific). 11.3 Create and follow a balanced strength routine (push/pull/core/lower body) with safe progression.	1. I can adapt movement to personal needs 2. I can be efficient and purposeful in movement selection 3. I can refine individual movement patterns.	Activity 1: (35mins) Provide a list of exercises for each group (see attached). Each group must identify exercises from the list which are suited for a mix of Muscular and Cardiovascular Endurance. They will then prepare a warm up activity and choose 4 exercises alternating Muscular and Cardiovascular endurance with a work/rest ratio of 20:10 and a total of 4 sets per exercise Activity 2: (5mins) Cool Down. Select appropriate muscle groups depending on the activities chosen and stretch List of activities: • Farmer carry • Skipping rope • Walking lunges • Sled push/pull • Plank • Mountain climbers • Stair climbing	Cones Mats Timer Selection of resistance bands, dumbbells and kettlebells
	WALT We are learning to design, monitor, and refine a personalised fitness programme.			

3	11.3 Create and follow a balanced strength routine (push/pull/core/lower body) with safe progression. 11.4 Design and justify a personalised injury-prevention routine using movement principles and technology.	1. I can design a balanced strength routine 2.I can prioritise technique and injury prevention 3. I can reflect on effectiveness of exercises.	Activity 1: Warm up + Mobility exercises (5 mins) Activity 2: Station work (10mins) <table border="1"><tr><td>Push up – incline/flat /decline (push)</td><td>Resistance band rows (pull)</td><td>Bodyweight/ weighted squats (lower body)</td></tr></table> Activity 3: Station creation (20mins) Students will come up with 3 strength based (push/pull/lower body) exercises	Push up – incline/flat /decline (push)	Resistance band rows (pull)	Bodyweight/ weighted squats (lower body)	Cones Mats Timer Selection of resistance bands, dumbbells and kettlebells
	Push up – incline/flat /decline (push)			Resistance band rows (pull)	Bodyweight/ weighted squats (lower body)		
WALT We are learning to design, monitor, and refine a personalised fitness programme.							

4	11.4 Design and justify a personalised injury-prevention routine using movement principles and technology. 11.5 Independently plan, justify, and adjust a fitness programme linked to personal goals. WALT	1. I can manage load and recovery independently. 2. I can evaluate long term wellbeing. 3. I can make informed training decisions.	Activity 1: Warm Up + Mobility (5 mins) Activity 2: Station Work 6 stations (15mins) Students will set up the areas and carry out 4 given exercises + 2 that they will come up with focusing on injury prevention. Stations: Single leg balance + reach, glute bridge, plank with shoulder taps, bodyweight squat (slow and controlled), Cool Down: Ankle, hamstring, shoulder and chest stretch	Cones Mats Timer Balance boards
	We are learning to design, monitor, and refine a personalised fitness programme.			

5	11.5 Independently plan, justify, and adjust a fitness programme linked to personal goals. 11.6 Demonstrate autonomy, resilience, and reflective practice to sustain long-term wellbeing. WALT We are learning to design, monitor, and refine a personalised fitness programme.	1. I can plan, implement and review programmes. 2. I can demonstrate independence 3. I can value fitness for wellbeing	Warm up: (10mins) While warming up, ask students "Why would someone want good fitness at 30 or 40 years old?" Guide them toward: • Reduced risk of heart disease • Better mental health • More energy for work and family • Independence later in life Activity 1: (25 mins) Let students plan a simple workout based on fitness components that they feel they should improve and carry it out. Cool down: Stretching based on appropriate muscle groups used during the workout	Cones Mats Timer Selection of fitness equipment
---	--	---	--	---

6	11.6 Demonstrate autonomy, resilience, and reflective practice to sustain long-term wellbeing. 11.7 Use apps to analyse training data; critique societal expectations around fitness; design personally meaningful programmes. WALT We are learning to create, assess, and continuously improve a personal fitness plan.	1. I can value fitness for well-being 2. I can critically examine the fitness culture 3. I can consider equity and access beyond school	Activity 1: Show students data taken from a school trekking activity pointing out 6 key metrics: Distance, Time, Speed/Pace, Elevation, HR (if available), Splits (5mins) Activity 2: Warm up: Walk in groups around the yard for 500m (timed). Double the time and compare to data shown (10mins) Activity 3: Divide class in groups of 5. Each student will walk/jog/run 200m in rotation to finish a 1km. Compare to data shown. (10mins) Activity 4: Retry activity 3 and check for improvement of time. (10mins) Activity 5: Cool down (5mins)	Cones Mats Timer
---	---	--	--	---------------------------------------

7	11.1 Select appropriate movement patterns when designing personal routines; refine technique independently. 11.7 Use apps to analyse training data; critique societal expectations around fitness; design personally meaningful programmes. WALT We are working on designing, monitoring, and fine-tuning a personal fitness routine	1. I can value fitness for well-being 2. I can self-monitor movement quality 3. I can adapt movement to personal needs	Activity 1: Ask students the following questions: What messages do we hear about what fitness <i>should</i> look like? Who decides what 'fit' means? How might these messages be unhelpful? (5mins) Activity 2: Warm up: Jog for 500m and compare to previous lesson data + mobility (5mins) Activity 3: Circuit of 4 stations with two choices within each: 2 minutes each + 1 minute rest/rotation. For each station, a societal message is placed. Station 1: Bodyweight squat or chair assisted/partial squat Station 2: Light skipping rope or brisk walking. Station 3: Plank or Dead bug. Station 4: Single leg balance or Leg Raises Societal messages: Squats don't have to be deep or look the same for everyone Cardio doesn't need to be fast or sweaty to be valid	Cones Mats Timer
---	---	---	---	---------------------------------------

			Core strength isn't about getting abs — it's about supporting your body Balance and mobility are just as important as strength. Fitness is multidimensional (20mins) Activity 4: Cool down and discussion about quotes "Which movements felt best for your body today?" "Did you choose different options than your friends? Why is that okay?" "What's one fitness myth you think isn't helpful or accurate?" (10mins)	
--	--	--	---	--

8	11.1 Select appropriate movement patterns when designing personal routines; refine technique independently. 11. 2 Sustain individually planned endurance blocks aligned with personal goals (e.g., HIIT, circuits, sport-specific). WALT We are learning to design, monitor, and refine a personalised fitness programme.	1. I can design endurance activities aligned to goals 2. I can apply pacing and recovery strategies 3. I can evaluate endurance outcomes	Activity 1: Warm up: Students will create a suitable warm up activity (5mins) Activity 2: Using the principle of 30:30, design a simple workout with a mix of agility and strength (30mins) Activity 3: Cool down and appropriate stretch	Cones Mats Timer Selection of fitness equipment
---	--	---	--	---

9	11.2 Sustain individually planned endurance blocks aligned with personal goals (e.g., HIIT, circuits, sport-specific). 11.3 Create and follow a balanced strength routine (push/pull/core/lower body) with safe progression. WALT We are learning to design, monitor, and refine a personalised fitness programme.	1. I can adapt movement to personal needs 2. I can be efficient and purposeful in movement selection 3. I can refine individual movement patterns.	Activity 1: Warm up (5mins) Possession game 2vs2 using a Handball Activity 2: (30mins) Each group must identify 6 exercises suited for a mix of Muscular and Cardiovascular Endurance. The work/rest ratio is 40:20 and 4 sets per exercise Activity 3: Cool Down. Select appropriate muscle groups depending on the activities chosen and stretch	Cones Mats Timer Selection of fitness equipment
---	---	---	---	---

10	11.3 Create and follow a balanced strength routine (push/pull/core/lower body) with safe progression. 11.4 Design and justify a personalised injury-prevention routine using movement principles and technology. WALT We are learning to design, monitor, and refine a personalised fitness programme.	1. I can design a balanced strength routine 2. I can prioritise technique and injury prevention 3. I can reflect on effectiveness of exercises.	Activity 1: Warm Up + Mobility (5 mins) Activity 2: Station Work 6 stations (15mins) Students will set up the areas and carry out 4 given exercises + 2 that they will come up with focusing on injury prevention. Stations: Jump + soft landing, Lateral step + stick, Forward hop + stick, Dead bug Cool Down: Slow walk + breathing, seated hamstring stretch, figure 4 stretch, child's pose	Cones Mats Timer
----	---	--	--	---------------------------------------

11	11.5 Independently plan, justify, and adjust a fitness programme linked to personal goals. 11.6 Demonstrate autonomy, resilience, and reflective practice to sustain long-term wellbeing. WALT We are developing, tracking, and adjusting an individualized fitness plan.	1. I can plan, implement and review programmes. 2. I can demonstrate independence 3. I can value fitness for wellbeing	Let students create their own personal/group lesson including suitable warm up and cool down	Cones Mats Timer Selection of fitness equipment
----	--	---	--	---

12	WALT Evaluate movement and reflect on effort and responsibility	Movement Skills 1. Follow hexagon pattern safely 2. maintain balance 3. Perform consistent foot placement. Strength 4. Maintain plank alignment Endurance 5. Pace shuttle test Record results accurately.	Warm up Perform each test in the following order: hexagon test, plank test, 2-minute shuttle run. Cool down: Stretch for calf, quads, hamstring, chest, shoulder	Cones Mats Timer
----	--	--	---	---------------------------------------
